Subject: CAD cell monitoring posters

Bob, Deirdre and Paul - now that its December I thought it'd make sense to start roughing out Battelle's poster effort. The due date is 1/27/10 (public meeting is 1/28). Key thing to remember is that this is NOT a technical audience, but rather the general public. So less wordy and more visual. Also doesn't have to be one poster, can be 2 or 3. Maybe one poster with multiple panels to show the results of the velocity survey at different tidal stages and depths? And then one or two more for the results of the plume monitoring and results?? Not trying to dictate anything here rather thinking out loud to get the gears rolling.

Maybe Battelle should get back to us in a week or two with their ideas/concept.

And does 1/8/2010 make sense for final drafts? That would give 2.5 weeks for final review and production.

Thanks and let me know what you think. If it would help I can forward some of the other posters we've developed to date.

Dave
